Objective

Computer Science undergraduate specializing in cybersecurity with a focus on secure system design and application development. Hands-on experience in developing security solutions including secure file-sharing systems and network security gateways. Strong interest in threat analysis, vulnerability assessment, and building resilient systems for real-world applications.

Education

SRM University — Chennai, Tamil Nadu
Bachelor of technology in Computer Science with specialization in Cyber Security — *Aug 2023 – Aug 2027*

Kairali School — Ranchi, Jharkhand
Senior Secondary, PCM, CBSE — *April 2021 – May 2023*

Bishop Westcott Girls School — Ranchi, Jharkhand
Secondary, PCMB, ICSE — *April 2020 – April 2021*

Hackathon Experience

Smart India Hackathon — Sept 2025
Team member and front-end developer — *Remote, On-Site*
- Built user friendly and responsive interfaces for Farming Assistance using HTML, CSS, Javascript and frameworks

24-hour Cyberthon 2025 — Jan 2025
Yuniq — *On-site*
- Designed and developed full-stack interface for the privacy checker tool using modern web technology

Work Experience — Aug 2025
Quantumease Technology - Internship — *Online*
- Gained hands-on experience on cybersecurity fundamentals, including firewalls, network security concepts, and threat prevention techniques

PwC Virtual Experience Program — Feb 2026
Launchpad- Internship — *Online*
- Gained hands-on experience in Generative AI, modern data systems, Java, and cybersecurity threat detection through PwC's virtual program.

Projects

CyberShield – Blockchain Enabled Security Gateway — Jan 2026
- Architected and implemented a blockchain-enabled security gateway to detect, prevent, and mitigate cyber threats.
- Integrated Web3 and decentralized identity management for tamper-resistant authentication and access control.

BFHL Hierarchy Analyzer – Node.js, Express.js, REST API — April 2026
- Developed a REST API using Node.js and Express to process hierarchical data and construct tree structures .
- Implemented features like depth calculation, duplicate detection, and deployed the backend on Render .

Blockchain and Web3 Security Applications — Nov 2025
- Built blockchain and Web3-based security applications using smart contracts and decentralized architectures.
- Applied SOC Analyst (Security Operations Center) practices for log monitoring and incident response.

Technical Skills

Programming Languages: Java, Cpp, Python
Web Development: HTML, CSS, JavaScript, React.js, Node.js, Express
Cybersecurity and Blockchain: Blockchain, Web3, Smart Contracts, Encryption, PKI, SOC Basics
Developer Tools and Platforms: Git/GitHub, VS Code
Other Skills: Cybersecurity Fundamentals, Applied SEO techniques including keyword optimization and on-page improvements to enhance website visibility
